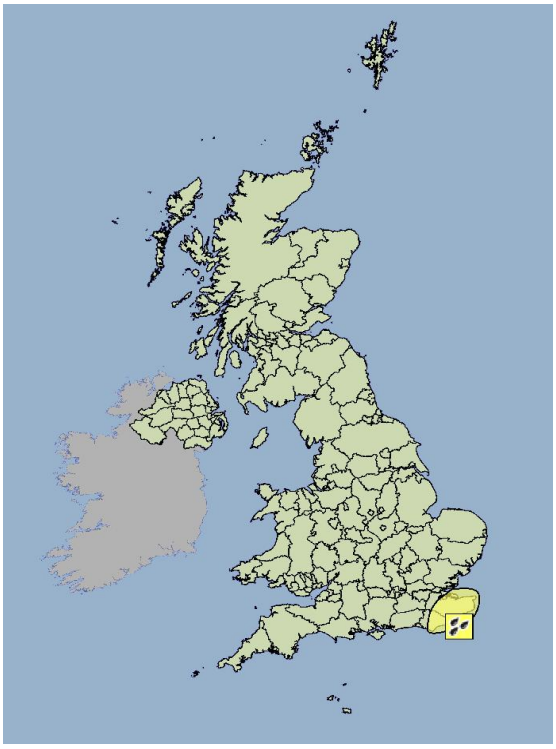
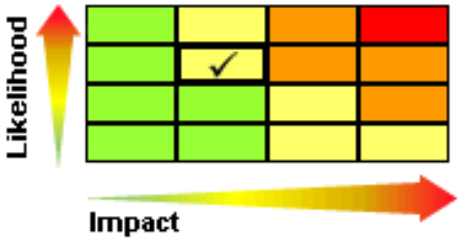
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will drift slowly eastwards through Saturday, bringing heavy showers and more organised bands of showery rain. Cold air passing over the sea, which is still relatively warm in early October, will release large amounts of energy leading to a risk of thunder and hail, especially over English Channel coasts. 30 mm rainfall is possible in 2-3 hours in places, with some locations perhaps seeing 40 mm in less than 6 hours. This brings a risk of surface water flooding, whilst hail, lightning and gusty winds may present additional hazards.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **04:00 on Sat, 01st Oct 2016** until **20:00 on Sat, 01st Oct 2016**

Showers will become more frequent later on Friday night with spells of more persistent showery rain developing through Saturday morning. The rain and showers will be often heavy with a risk of hail, lightning and gusty winds.

Be aware of the likelihood of localised surface water flooding and difficult driving conditions.

Rain and showers will become less heavy towards evening before clearing after dusk.
